However, in 2018, after T'Challa was warned by the Avengers that Thanos' army was coming, he visited Barnes at his remote hut and gave him a new vibranium prosthetic arm that had been designed by Shuri. Rocket interested in Barnes' arm During the Battle of Wakanda, Barnes used the vibranium arm to wield his rifle with great efficiency, defeating many Outriders. I can take them." —Winter Soldier to Falcon[src] The bionic arm gives him strength superior to that of Captain America, and comparable to that of Iron Man. Winter Soldier was able to rip open a S.H.I.E.L.D. armored SUV, rip apart Sam Wilson's EXO-7 Falcon, and smash concrete by punching it. With his bionic arm supporting his already-enhanced natural strength, the Winter Soldier was able to overpower Captain America in a fight.[1] The limits of the bionic arm's strength were realized during the Avengers Civil War. While the arm was stronger than a natural one, it was not as flexible. This was seen when the Winter Soldier found himself matched by Spider-Man, an enhanced youth, who was able to counter his blow due to his superhuman strength and bend back the appendage with ease. The arm was later almost overpowered by the Black Panther whose own enhanced strength combined with his vibranium suit, the Panther Habit, allowed him to push back the force of the bionic arm while exploiting its limited mobility. The arm proved inferior to the gauntlets of the Mark XLVI as Stark was easily able to counter it before disintegrating the limb with his unibeam.[2] Despite being equipped with a new vibranium arm, its capabilities were shown to be relatively similar to his original bionic arm with the added benefits of being vibration absorbent and nigh-indestructible. Despite all of these positives, It was detached by pressing a combination on the arm, as a contingency if Barnes ever reverted to his HYDRA Programming, which was later used by Ayo during her scuffle alongside Falcon, U.S. Agent, Battlestar and a few of her subordinates while debating what to do with Helmut Zemo. Even without the combination, beings of sufficient superhuman strength, such as Nebula and Sentry, are capable of removing the arm through brute force.
