Yes, going to the ATM is a bit cumbersome, I cannot find the product specification for Liniarage_Mantis, so I have to work with this ATM, firstly, have you put together the Rome? Best regards. Ok, did you have to collect and flash in recovery mode? I don't believe. How can you successfully create a Rome without mistakes? I am new to Rome development and would like to know how I can compile my own Rome myself. Okay, do I have to build it and flash it in recovery mode? I don't believe. How can you successfully create a Rome without mistakes? I am new to create Rome and would like to know how I can compile my own Rome myself, only LOL. What have you done? I will not do a Rome for you ... and no, I will not guide you, I have already written that Diego and I have compiled a Rome. Best regards. ThereafterTrial and error, I finally saved my latest version of my system with a TWRP backup. I want to share this personal setup with you because it took a lot of work to install accessories, programs, kernel and cheats. This is a package that includes many mods from other threads and was created for easy one-time installation. I tried to keep it close to the Android TV (Nougat) experience. However, I have protected some Amazon software that I use like Alexa and Amazon Appstore. The chefs I have found and used for this rum:!! Please read these threads before you start!! A!! All credit goes to these creators!! "Specific information: Fire OS version: 6.2.7.6 TWRP version action: 3.3.1-0. Installed version of Magisk: 20.4. Installed launcher: Google Leanback Start. Possible internal memory after calculation. 3.15 GB Screen: â Sisikiria: == enabled in settings) (Long press the menu button to quickly toggle) Amazon Fire TV Remote Settings (I highly recommend using this app for perfect navigation and keyboard input) Amazon Appstore (you can download previous paid apps from here Install Feature Finder Amazon Appstore works with Alexa only with Alexa) Google Play Store and FireV IME -The ROM must be Magiskiskiskiskiskist Services Xposed Goods to run Widevine DRM (Netflix, Primevideo, etc.) D. === = A simple alternative to Tasker or Key Mapper with root access I "I'm split in a long key" button "Kla vish Keyard Pro" (introduced with the Tsynik Magisk module and I liked it) Smart YouTube TV (a YouTube modified application that allows dozens of options. I use it to increase image retrieval speed) MX and VLC Player (play local or online streams) Aerial Dream TV (great screensaver with Apple TV images) Prime Video, Netflix, Spotify (don't leave the launcher empty) Install MAGISK Modules: Xposed Framework (ROV089) Google TV App for Fires 6 (TSYNIK) FIRETV4K SELINUX FIX (Pretlorian80)Mozpr xposto: 16th edge of AFTV-XM (ньяпик) AFTV-GAPPS-XM (ньяпик)

=== = ==? @Synik for the creation of these
==================== = = OTG USB-KEYBOARD USB-KEYBOARD / MOUSE USB-KEYBOARD IN FAT32 or FIRESTICK 4K monitor how to install: Note that your warranty will be canceled. Create a backup copy of your files. Unlock the start -up charger and install TWRP using this guide. Load and deduce the Android TV Backup Firestick 4K Twrp on TWRP backup on a USB unit; Twrp> Backup> G070984752N1 Restores the factory settings using TWRP (Use the OTG and keyboard / mouse adapter), restore it from the prepared Twrp backup. Mount in the system. Connect to Wi-Fi and enter your Amazon account. (Always using a keyboard or a navigation mouse) Access "Settings"> "Fire OS"> "" Bluetooth management "and compliance on the Fire TV remote control (you can now refuse the keyboard). Mirror: Additional notes: Developer parameters and USB unscrews are included. Or-Rineval is disconnected. If you want the screen saver to work, deactivate the option to "wake up" in developers' parameters. In the long term by pressing the "rear" button, it kills the application in the foreground. This facilitates the termination. Long -ERtermate Click on the menu button opens the keyboard switching window. This allows to go to the Amazon keyboard when I use the voice entrance. You can change the launcher in everyone who wants. I am satisfied with the leanback launchers. I have not tried, but here. Amazon Magisk. Use TVRP. To save Tw RP, select "System image" and "Image of the supplier" instead of "system and supplier". Tip: FX web access simplifies file transfer. Advice: I believe that the keyboard of the distant FITV application and the vocal voice of Alexa in the text are the most effective input methods if you do not have a physical keyboard. Important: Play Store downloads are not entirely compatible with Amazon Download Manager. If the applications are not installed by the Play Store, delete the Play Sore update from mountain bike settings. Please note: after updating the form, you must delete and read your Google account. Netflix and spotify apps built are compatible with Alexa. I could not force my Dualshock 4 controller to work with this device. Also with a sharing system. Help is welcome. Reddit messages for this manual: here and here == = ================================

Magisk rescue modules, which are mainly the key to this assembly.To build a kernel that supports SDCARDFS, exFAT, F2FS, Wireguard, advanced TCP, CIFS and NFS options, insecure ADB. @bnevets27 for removing the script. @Skel40 to tweak build.prop to improve performance. @Bertonumber1 for ROM testing. Last edited: 02/06/2021 Reactions: ahsad, Smoking, dortmundez and 18 others Great job, a lot of time and effort paid off m8. Well done just a small question...another member had issues with his mac after a restore, given that he restored from another 4k via twrp, I assume this is the same scenario as his? Tested on other 4K devices, it can sometimes be a problem on different devices but should be fine. Last edited: 12/27/2020 Reactions: A lot of effort, time and effort paid off with the burcbuluk m8. Good job, just a question. A few weeks ago I saw another member restore from one 4k drive to another, the result was not very good. I imagine it's the same scenario as his as he was restored from another 4k via twrp. Has it been tested on different devices? Since I have a spare stick I can test with my Mac's WLAN if needed, does it save the serial number? No, I haven't tried with another device, unfortunately there is only one. I would appreciate it if you could try it. Thank you very much. Can you share the topic you are talking about? Reactions: Hotrod369 Yes, there is definitely some information here, but I don't know if it is different from your technology, but it looks similar... Last edited: 2020 December 27 Reactions: Hotrod369 I ran this on 2 FireTVs and brought 4k. I used YouTube but never got around to customizing Amazon voice search. Do you know how to set it up correctly? Reactions: puppino9 Is there a way to play and toggle play buttons from youtube? Just a warning as recent events may result in members being denied #root, starters, adb.pm commands, etc. It is highly recommended to disable OTA updates for Mantis if they want to continue with mods. 6.2.7.7 update container containing Boogeyman and ADB commands and more. It has a second "system update" section that breaks everything down. #root, launcher, adb pm commands, etc. It is highly recommended to disable OTA updates for Mantis if you want to continue modding The 6.2.7.7 update container contains the second part of "System Updates" which covers bogeyman and glitchesLike ADB teams, etc. using TWRP-backup, downgrading is possible at any time, right? I may try to create the same configuration later for younger versions. Reactions: Hotrod369 TWRP backup at any time is possible to lower, right? I may try to create the same configuration later for younger versions. Yes, ofc should do this, it is possible to lower the version with TWRP at any time, right? I may try to create the same configuration later for younger versions. If enough should be enough: Deactivate Addons (XPosed) Boots according to TWRP and Wipe/System, Dalvik, leave the cache in peace, then restart after the previous firmware flicker from TWRP and re -XPOSED, restart additions, maybe another restart? IDK Reactions: Hotrod369 yes from the OFC, should do so, should be enough to do the following: Deactivate Addons (XPOSED) boot to TWRP and Wipe/System, Dalvik, leave the cache in the world after the previous firmware from - TWRP restart - TWRP. And again activating Xposed, Addon, maybe another restart? Idk, well, thank you, just thank you! My fire rod was a chaos and it was a children's game. I do not know if this is the case, but I found one thing that if you stream something in the streaming service, the video will continue in the background when you press the start button (you can still hear the sound). I solved it by changing the start button to "end the current foreground application". Last edited: On January 4, 2021, reactions: Hotrod369 just wanted to thank you! My fire rod was a chaos and it was a children's game. I do not know if this is the case, but I found one thing that if you stream something in the streaming service, the video will continue in the background when you press the start button (you can still hear the sound). I solved it by changing the start button to "end the current foreground application". Hello, try this app, should end all the background processes and release memory, also thanks to the reaction of the TDUK: HotRod369 and Papeboy 2 With the only perspective I can give. I use the same youtube app. Loading times are significantly longer than fires. I connect my USB TV so it stands out every time. I would say it's twice as long to load your Rome. I. The remote control works great on Fires. This allows you to jump without this shade and require interrupted and special play-off buttons. 2The app in the same APK file does not support live streaming. I'll be back, it was fun to hack. Decades of years. Anyone who doesn't want to delete anything from the private file in 6.2.7 and about Prophet: /$ (if you are not using 4K), now you have some interface options. The Enter key event will return busy device/resource/dev/block/soc/11230000/by -name à sytem - system error. I have most of the junk, but there are a lot of things that can be removed for good. Last updated: 2021 January 11 TWRP. I always use TWRP for this. Run TWRP ADB Shell Mount -o RW / System Try TWRP. I always use TWRP for this. Run TWRP ADB Shell "Mount -o RW / System" always the same TWRP Mate, same error. Shell ADB Mont -o RW/System error: Montain/Dev/Bloc/Mmcblk0p11 ON/FAIRM System: Device or resource busy....WTF? Is it new with a newer OS? I never had that before trying side 2 with node and layers (no problem). Maybe try ReBash Magic. Save your files. Unlock the boot charger and install TWRP using this guide. Download Firestick 4K Android TV TVRP Backup.rar and extract it to TWRP backup path to USB flash drive; TWRP > Backup > G070VM0984752N1Q Perform factory reset with TWRP (use OTG adapter and keyboard/mouse to navigate) Restore from prepared TWRP backup.in the system. Join the WI -fil and log in to your Amazon account. (You are still using a keyboard or mice to be transferred) Go to settings> Fire OS> Driver and Bluetooth Devices and connect the Fire TV remote control. (Now you can get rid of the keyboard) Entrium. Mirror: Other comments: authorized programmers and USB adjustment. OTA update is disabled. If you want the Savior of the screen to start, disable the "Stay Up" programmer setting. Press the Back button for a long time to get out of the application in the foreground. Facilitates completion of activities. Press the menu button for a long time to open a fast switching window. When I use the entrance to the voice, it helps me go to the Amazon keyboard. You can change the trigger as you like. I am happy with Launcher Leanback. I haven't tried, but it is important here: never install magic updates. Use TWRP. Choose "System" and "Image" instead of a system and supplier to create a backup copy. Design: FX Web Access makes it easier to transfer files. Project: I think that the remote keyboard and converting FIRTV to Alexa's text are the most effective method of entering if you don't have a physical keyboard. Important: Netflix and Spotify are in line with Alexa. I could not put the DualShock 4 controller with this device. Also with the sharing system. Help will be provided. This reddit message guide: here and here
== @K4Y0z and @xyz' to unlock the starting device. @Tynik for creating this life, which includes Magisk modules, which are essentially the key to this man. @Pretoriano80 To create a core that SDCARDFS, EXFAT, F2FS supports, wire garden, extended TCP, CIF and NFS options, unsecured ADB. @Bnvets27 for a debate script. @SKL40 Optimization for fruction.PRE to increase performance. @Bertonumber1 for the Rom test. Can I change SN from your file? After recovering, the pilot stopped from the file. Rufted settings - "Remote control and accessories" cannot be clicked with FIretv. How to connect a remote control because I could not access the controller and accessories. Thank you! Last construction: Thank you! Just stuck while downloading. How to fix it? Last modeluld: 27.01.It is possible to communicate with this ROM at the first time without a keyboard. You must use AdB Shell with USB. The USB cable connected to your laptop and FireTV Stick is connected to the HDMI monitor connector. First, somehow. I managed to log in to my Google account, but I got stuck while downloading. How to fix it? Last modelulld: 27.01.It is possible to communicate with this ROM at the first time without a keyboard. You must use AdB Shell with USB. The USB cable connected to your laptop and FireTV Stick is connected to the HDMI monitor connector. First, make sure the device is running and you can use FITV Stick using USB with ADB devices. Open a new case with a bad case. You should use a challenge that shows the mantis: /$ (may vary if you don't use 4K tapes.) Now you have several ways to interact with the user interface. Keyevel's input that allows you to send the key to the device as if you were working on the keyboard. Enter Mouse Press allows you to click on the screen using the coordinate grid. The upper left corner of the screen is x = 0 and y = 0. The right lower corner of the screen is x = 1920 and y = 0. To find the website you want to click on, you will need to experiment. Keyevent 20. 22. - Arrow on the right Keyevent 66 Add another x so that the mouse can click on something correctly. Add more y to the mouse Click on something at the bottom of the screen. The simplest option is to use Keyevent registration. Use this wizard to draw the keys to the numbers: Examples: Keyevent Entry 19 - Keyevent arrow input Type 20. 22. - Arrow on the right Keyevent 66 Add another x so that the mouse can click on something correctly. Add more y to the mouse Click on something at the bottom of the screen. The simplest option is to use Keyevent registration. Use this wizard to draw the keys to the numbers: Examples: Keyevent Entry 19 - Keyevent arrow input Type 20. 22. - Arrow on the right Keyevent 66 - "One" key on the keyboard. Your goal is to get FireTV to join your home network after entering the WiFi password. When you are on a network, you can use the FITV application on your phone to interact with your device. You can also approach the SOMEM Setting for drivers and get rid of the missing remote ID next to this ROM. To do this, start a double process. When the old remote control (which you do not call the "SELECT" button, press the SELECT button in your FireTV application and the connection will continue. I hope it helps someone like me without OTG or keyboard. Last modification: February 6, 2021. Reaction: Joe Ghosts, Hasobises, Puppinoo and 5 other Netflix, who still work on 4K quality after installing this ROM? Anyway, the first album. It is possible to communicate with this ROM at the first time without a keyboard. You must use AdB Shell with USB. The USB cable connected to your laptop and FireTV Stick is connected to the HDMI monitor connector. First make sure the device is running and you will see that Figetv is glued to USB with power devices. Open a new case with ADB Shell. You should see a tip showing Mantis: / $ (it may be different if you do not use 4K flash disk). Now you have several interaction options.User interface. Enter Keyevent , which allows you to send shots to the device, as if working with a keyboard. Enter the entrance mouse , which allows you to press on the screen elements using a coordinate grid. The upper left corner of the screen is X = 0 and Y = 0. In the right corner of the screen - X = 1920 and Y = 1080. You will need some tests and errors to determine the exact contact information about where you want to press do not be afraid to try. Add more X to click the mouse on the right direction. Add more y to click at the bottom of the screen at the bottom of the screen. The easiest option is to use the key input. Use this manual for the shock cards by numbers: Examples: Keyevent 19. Record - Protection Street for KeyEvent keyboard - down to "Signing keyboard Keyevent 21 22 - keyboard keyboard to the right 66 Introduction - Enter KeyEvent 29 Keyboard input - Touche 'a' on the keyboard. When you are on the network, you can use the FireTV telephone application to interact with the device. You can also access the Fireos settings for remote control and the controllers and separate the inappropriate identifier of the remote control provided by this ROM. To do this, start making a couple. When you ask to click on the "old" remote control (which you do not do), just click (press on the sidewalk) in the Firev application and he will connect. I hope that this will help someone without OTG or keyboard like me. This can be done using Adblink. He has an EU the keyboard function. Hi, I'm sorry for the question Noob, but I don't understand how you can restore from a USB key because I need an USB input of OTG to connect the mouse keyboard/USB? Can anyone explain what to do, leaning between the keyboard/mouse and USB storage? Thank you, page 3. I really feel a desire to try it on my 4K fire tv -on ... Amazon tried the official Apple TV application, and if I wonder if it can break it. In addition, it would be nice to know whether HDR and Dolby Vision and Atmos work on Disney+, Netflix (perhaps the atmosphere will work now?) How does this work with the expansion of storage? It is always the same? YES. Really seduced to try on my 4K Fire TV Stick ... Someone tried the official Apple TV application andDoes it work with these ROMs? I know that Apple has a restriction for the application which prevents him from reaching other devices, so I wonder if that could stop him. It would also be great to know if HDR and Dolby Vision and Atmos still work with things like Disney +, Netflix (maybe the atmosphere works now?) It works. There may be differences between devices. You have to try it on your stick. No problem, Imho must always be installed Twrp. Then there are only 30 minutes left. To secure an old Rome, install it, try what you need and return to old Rome if you are not satisfied. Hello, Excuse the NOOB question, but I don't understand how you can restore a USB because I need an OTG USB input to connect a USB mouse / keyboard? Can anyone explain how to go from keyboard / mouse to USB memory? Thank God, I had another USB, my mouse and my keyboard directly via Firetv or OTG. I combine USB Hu with OTG (even my 10 years old works). It also works in TWRP. Answer: Burcalcloud and Marcge 63 Connect USB, the mouse and the keyboard not directly with Firetv or OTG. I combine USB Hu with OTG (even my 10 years old works). It also works in TWRP. Thank you so much! He did it with a USB hub ... The restoration took time. The start time is longer than the original, don't worry. Everything works as expected, I love it! Does Chromecast work on Firestick 4K after installed this Rome? If so, I buy it. Once installed, it's pretty nice. It looks a bit like my sign, but not so beautiful. Slow 4K running... Another very good job, keep going. Now I have to

dig the other old stick and leave the root as it is. I had an experience with this Rome and Google assistant seems to work (except for language research), if you try to enter it, it works. I bet that this must be estimated, the possible withdrawal / blocking of Alexa and the offset button on the remote control to start Google Edit Assistant: I was right, Google Assistant works. I was able to use the language search and therefore control my smart house. To make it work: -Publier Google Assistant in the parameters of the ATV -Go Home language and agree to use the microphone when you try to search -GO on Xposed Edge Pro Calls (I have received the volume) and The Google Assistant button (it is under activity> Google> Search activities (Remember to activate the button)-Do it as you use: Press it: Press the selected button and press Alexa MicrophoneAnd the last change would work. 2021 Feb 15 Answers: Akela1979, Lukas.schier, Yan2xme and 4 other Extractarfors bugs. Some advice? Also, when restoring the backup extracted from the device folder after the restoration of the factory settings, I get the "Extractarfork() error with bad: 255". Page 4 changed some variables at a time, but it works fine now. I made both sticks. USB 3.1 Flash Volume MBR re-entered into Flash/TWRP/Backups/G070VM09847S2N1Q powered by Windows Hub USB 3.1 OTG RAR AD -Latta formatted on FAT32. Should I have blocked Amazon updates when Puppinoo and Carsti77 were running out? I was right, Google Assistant Works. I was able to use vocal research and control my smart home. To get it working: - activate Google Assistant in ATV vocal settings - go home and agree to use microphone when you try to call - connect to Xpose Edge Pro - select button (I used volume for testing) and activate Google Assistant's switch (this activity under > Google > Search Activity (don't forget to turn on the switch) - how to use: Press the selected button and press the Alexa Mic button and it works, thanks, thanks Sometimes I block and "sorry, sorry, is there something wrong?" Do you get them too? Maybe the microphone button (long press) instead of volume I think you can choose between Alexa and Ga, but the first click is Relivativa GA and then click for a long pressure change of the microphone, then a long press on the microphone, and I can use the buttons to search activity updated: 2021 Feb 17 17 thanks, sometimes blocks and "Sorry, something went wrong". Are you taking them too? Maybe there is a conflict with Alexa and should I turn it off? Also, even though I thought you could choose between Alexa and GA, I've mapped the mic button (long press) instead of the volume, and using the two buttons seems to work (not very well). I can redistribute the activity to a short pressure for the first pressure to reactivate the AG followed by a long pressure. I've modified the mod now, so a short tap on the microphone and a long press will activate the GA. Still going wrong every once in a while. As you said, I didn't use a short microphone. I didn't try to turn off Alex. But I think it helps to improve it. In any case, it's not worth it. Google assistant works, but the seams of vocal call will be organized. I can't find TV shows or other things, but I can use them to check the desire to help with intelligent and accidentally ... In any case, I try to connect it to the home system using the buttons, but I put on 't I think this is a suitable installation GGAP, so I can't even find it at home. I experiment with this Roma and it seems that if you try to write, it seems that (with the exception of voice call). I can argue that you have to repeat the remote volume button to remove Alexa and delete Google Assistant: Google Assistant Works. I managed to use voice calls and use them to check my intelligent home. For work: -Borsée voice calls in the ATV -i -i -i -i -i -i -i -i -i -GOD -GOOD SHIPPING -GO -GO -GO and accept microphone -xpose Edge Pro -none button (I use volume to show and use use) and use volume) and use volume) and use volume) and use volume) and use volume) and use volume) and use volume) and use volume) and use volume) and use (to activate "Selected button" and click the Alexa Micron button and thank you for the job. I am not sure that it stops the audio input of Alexa with audio input. After completing I have to block Amazon updates? For information. The way to stop, Google chat with assistants, the action comes Google Chromecast as about Ficial TV device? Discos has no casting, Android TV Chromecast options? I really don't know what in your opinion my first streaming/casting device that I have never used on Android TV. By introducing a mirror menu on the device screen I can reflect the Android phone screenThe broadcast symbol shows up on the video players and when I click it streams the video to the FireStick. I also use an app called AirPin Pro to transfer/mirror my iPhone screen to FireStick and to watch it Android TV before. If I bring up the screen mirroring menu on the device, I can mirror my Android phone screen, or the video players will show a broadcast icon and when clicked, the video will be transferred to the FireStick. I also use an app called AirPin Pro to transfer/mirror my iPhone screen to FireStick and it works great too. If you're wondering about the broadcast button that appears on YouTube, Prime Video, etc., yes, there is one. Do you need to open the Fireos Cast app to get it before you can cast? Do you need to open the Fireos Cast app to get it before you can cast? For Android Yes. I use an iPhone as my primary input and Airplay is always on and shows up as FireStick on my iPhone. Like I said, I did it with an app called AirPin, so maybe you can find an app that does the same thing with Chromecast, but I'm not sure. Thank you. If you need to open an app called AirPin, so maybe you can find an app that does the same thing with Chromecast, but I'm not sure. Thank you. If you need to open an app and enable sending, this is the Fireos sending app. This is not a Chromecast feature on Android TV; It's not the same. Using Chromecast is more convenient. I found this thread. It claims Chromecast works on FireStick with this app, but it's too old. I would try it anyway, everything is happy and running (I had to enable experimental mode in Stadia). Most apps are fine. Only one application does not want to run - Live NetTV 4.8.2. I have restored the original Fireos with TWRP and Live NetTV works fine. Any indication of a live NetTV launch? Response: Burcbuklu can I remove the launcher from Amazon? Hello, I'm trying to create a backup so that I have an image to clone the flash drive, but when I start the process it says somethingWhat am I doing wrong? Thank you. Don't think it will work. Google worked hard to block these kinds of Chromecast Server apps from third-party vendors a long time ago. / Worked fine... stadium tests are up and running (had to enable experimental mode in Stadiums app). Most applications work fine. Only one application doesn't want to start: live nettv 4.8.2. Also TWRP restored original fireos and still live Nettv launch live nettv? It's easy to hear that cloud gaming works. I had planned to use Steam Link but couldn't get Dualshock 4 to work with Firestick. I don't know anything about this app, sorry. Hi, I'm trying to create an image backup for a clone, but after starting the process it didn't work. What am I doing wrong? You have selected only system system and provider image, right? Page 5 Can anyone get Prime-video recommendations for the Leanback launcher? Tried with official Android TV and Amazon - (actually native versions are best) Answer: Burcbuklu did you choose the right system image and provider? [/ QUOTE] No, thank you all for Rome, it works great! I still have a problem with Amazon Prime. It says I have a problem connecting to the internet. All other applications work. I googled the problem and it occurs when adblocker is on. Is it implemented in Rome? I have the same problem 1. Can anyone confirm if the HDMI output is disabled when the device is put to sleep? 2. Do you control the volume and mute buttons via Bluetooth instead of watching TV directly? If yes, then I will definitely try it. 1. Can anyone confirm if the HDMI output is disabled when the device is put to sleep? 2. Do you control the volume and mute buttons via Bluetooth instead of watching TV directly? If yes, then I will definitely try it. 1. Can anyone confirm if the HDMI output is disabled when the device is put to sleep? 2. Do you control the volume and mute buttons via Bluetooth instead of watching TV directly? If yes, then I will definitely try it. 1. Simply get the device into standby mode and check if the TV screen or monitoring message shows "no signal" as if the device is not connected. Background: The original firmware never turns off the standby signal, instead showing a black screen which never puts my monitor to sleep. So I have to manually turn the monitor on and off the monitor. 2. It's a pity. Maybe there's an app for rooted devices that lets you repack. For other Android devices, the same remote works like any other Android remote. thanks forMe! I have a better experience with the remote control software of the phone. The normal remote control should be weighed if I turn on ... anyway, I don't care. Amazing work. It is hoped that Amazon Cube will be able to use the same initial software device in the future. 1. In fact, I put the device in standby mode and see if the TV or the monitor will show "no signal" connected. Background: the original firmware does not turn off the spare signal, but shows a black screen that will never allow the sleep monitor. So I have to light and turn off the monitor manually. 2. I'm sorry. There may be several root programs to be redone. On other Android devices, the same remote control works like any other Android remote control. Thanks for trying, sir! I would like to have better news. If I leave it on, even after 45 minutes it does not enter standby mode ... When I manually put it in energy saving mode, the screen becomes black but does not interrupt the signal. So this "no village" that makes you sleep alone ... will stop everything. I don't know if I'm getting lost something. In the "Settings" menu, I created a Screen Saver configuration below. Amazon's fire offer has jumped. I would like to have better news. If I leave it on, even after 45 minutes it does not enter standby mode ... When I manually put it in energy saving mode, the screen becomes black but does not interrupt the signal. So this "no village" that makes you sleep alone ... will stop everything. I don't know if I'm getting lost something. In the "Settings" menu, I created a Screen Saver configuration below. Amazon's fire offer has jumped. The only problem I have is the remote control. After I turned off the stick. But if I use a phone with remote software it works perfectly. I think you should redo the process. Can someone help me? Is it normal for the Kamakiri script to not read my already exhausted device (already installed in Kamakiri) and take the team? (P.s. new OTG cable but not physical damage to the cable themselves occurred. I don't know if it was a hardware or software problem ... it isl, since I installed these beautiful mods in my old house ... Sorry for the chaotic text, I am not an American native of a native, I hope someone will help me ... thanks! Can anyone help me? Is it normal that the Kamakiri script cannot read my previously used device (Kamakiri has already been installed) and is not displayed in the team? (Psalm 2 - My focus does not have VM190 or higher, it was VM139, as in this area in its serial issue), because he doubted that my attention was not successfully flared up, since the mice signs were not shown Neither in the operating system (yes, TWRP is still loading, but I can't look) ... I have not tried to try the new OTG cable, but there was no physical damage to the cable itself. IDK if he was a problem with hardware or software ... it prevents me from installing these pleasant mods on my old site for breeding. ... Sorry for the chaotic text, I am not an American native of a native, I hope anyone will help me ... Thank you! My mouse sometimes takes up to 2 minutes or appear on TWRP. I allowed this to sit, and finally appears, and I can view with TWRP. My mouse sometimes takes up to 2 minutes or appear on TWRP. I allowed this to sit, and finally appears, and I can view with TWRP. Perhaps this is a problem with electricity, it takes time for the mouse to be delivered with electricity, so that it works, perhaps she needs a strong power source from a quick delivery ... someone has problems with a wireless ABB in a stick after installation? Regardless of what I tried, it doesn't connect ex fadel, because the connected participant did not respond properly after a while or the connection was not made, because the connected host did not answer. (10060). "It doesn't matter, I dried everything and everything appears. Now works. Last change: March 1, 2021. What to do? Try another mouse or keyboard if you have it. Thank you very much for this work, very nice. Has anyone changed the main photos? Thanks for Rome, which works very well! You still have a problem with Amazon Prime. This tells me that I have a problem with connecting to the Internet. All other applications work. I googled the problem, and this happens when Adblocker is active. Is this implemented in Rome? Thanks to answer the application by connecting to the VPN. Do you use VPN or router to aspect? Someone wasFor your favorite video recommendations on Leanback Launcher? I've tried using the official Android TV app and Amazon One (local version is the best), but I can't get the local Video Prime APK to work. Could you please share the APK you are using? @burcbuklu, is there any chance to do something similar to this ROM in Sloane? Thanks anyway, sorry. 1. Just switch the device to standby mode and see if the TV or monitor shows "No signal" message as if the device is not connected. BACKGROUND: Neevts software turns off the idle sound but instead shows a black screen that never puts the monitor to sleep. So I have to manually turn the monitor on and off. 2. On other Android devices, the same remote works like any other Android remote. Thanks for trying sir! For 2: using my FireStick with a computer monitor and AirPods, so I can't adjust the volume either. I haven't found a way to control the pad itself is physically intact. Idk if it was a hardware or software issue... It's not allowing me to install these nice mods on my old FireStick... Sorry for the messy text, I'm not an English native, I hope someone can help me... Thanks! My mouse sometimes takes up to 2 minutes for TWRP to appear. I just let it sit and eventually it pops up and I can view TWRP. Maybe this is a power issue. It takes time for the mouse to be powered with electricity so it can work, so maybe it needs a strong power source from a quick delivery... Does anyone have problems with a wireless mouse on the stick? No matter what I tried, it doesn't connect because it already rooted?), can I help please -update-- Regardless, I was able to run the kamakiri script again. I forgot to mention that this stick refuses to receive updates from Amazon, so I can't log into my account to activate eth. Hi, you say to disable amazon updates via the app, you can also use "adb reboot recovery" from your pc or "reboot recovery" from adb remote shell.sub-bootroot-step.sh but it doesn't seem to notice that it's not active. I've also tried running Magisk 8.4 directly to start a fresh firmware and see if you can set up a firmware and see if you can set up an APK without performing a firmware update. Sincerely, thank you for the link you added under Observation for future reference. Sorry I didn't understand, are you asking if my name is the name of Father Jesus? If so, you are right, Giuseppe is Joseph in English. Is it possible to replace OOOS with Android TV OS? I mean, OS-OS is completely irrelevant - the device is literally running the Android TV OS, that only remaining app is the remote control app. Fire OS has many restrictions, censorship, ads and bad things for us, so I can't get it to work with the keyboard? Firestick 4K is a pain in the neck. The only pre-installed apps are Google Play Store and Google Play Services. Thanks in advance for your help. This build and the Tynsku Magisk addons are the closest thing to an Android TV ROM. It ties into the kernel and the functions needed to create remotes and stuff. I followed the instructionsRemove the update, deleting the data and cache, delete and add my Google account. Trying to download something, he says "Download expectation" and does nothing else. My fire was on the black list, so I'm not sure that Amazon App Store does not work. Last modification: October 11, 2021. How did my experience performance in this Rome? I installed, Chemf? I tried the methods to change the initiator over the desertion, and now I thought whether I used ROM even more. While you successfully installed ROM, it seems that everything works except stadiums installed in the Play Store. The scene contains no collapse after a few minutes of the game. MainwelModule >>> com.google.stadia.android# Bluetooth Controller & Devices and connect your Fire TV remote. (Now you can get rid of the keyboard) Lots of fun. Mirror: Additional remotes, applications, kernel and configuration. This is a unique pack that includes several tools, kernel and configuration. The guides I found and used for this ROM: .... TWRP version: 3.3.1-0 - Magisk version installed: 20.44 - lancer installed: Google Learback Launcher -stock available inside another installation : 3.15 ... Screenshots: See attachment 5168831 Attachment 5168833 after attachment 5168829 this: contains:Service: Alexa's voice introduction from the Amazon keyboard. Open the Firetv IME keyboard in the settings) (Long -term menu button for fast switching) Amazon settings Fir TV Remote (I highly recommend this application)Install installation and entering data using a keyboard) Amazon AppStore (you can install applications for Widevine DRM (Netflix, Primevideo etc. ===12 applications with system applications RO. == 12 and @xyz' to unlock bootloader.

@Synik for creating those life saving Magisk mods that are basically the key to this build. @Pretorian80 for kernel build, SDCARDFS, EXFAT, F2FS, Wireguard, Extended TCP, CIF and NFS options, unprotected ADB. @Bnevets27 for the depressing script. @SKELAO for compiling the bootloader from the PC with LeanBack starter in version 1.48. Remove AFTV CAPS XM from Magisk, Reboot to Twrp, just Open Covenant and Katra Twrp and restart. You will see Google Voice and Google Assistant's magic after restarting! Thanks and wishes, subhash india, how should I use the OTG adapter? I can't feed Firetv from USB because the OTG adapter blocks the port. Without a USB power source that doesn't cover, you would you like to do it with OTG? Log in to your computer and follow ADB. They also work with Twrp, cleansing cache, etc. Shell Twrp/sdcard***.zip install twrp/sdcard***.zip delete twrp cache remove twrp dalvik reboot -p This doesn't work on Fire Stick Lite, does it? I installed a brand new Fire TV Stick 4k but wasn't using the OTG cable so I disconnected the USB cable. Now I'm using OTG with mouse and keyboard, but it's disconnected. I can't help. Please check the messages in this thread to see if someone has managed to develop mode is not active. I've also tried running Magisk 8.4 directly to start a fresh firmware and see if you can set up a firmware and see if you can set up an APK without performing a firmware update. Sincerely, thanks to start when fireV starts. Is this possible or do I need to add another application? THANK YOU VERY MUCH!! Good morning. I've been using this for a while and usually works fine. Now I can't open the Piex app. It still plants directly, I tried the google play store and amazon store version. Also Spotify doesn't work anymore from version, also Spotify doesn't work with the play app now the plex app will lose the keep awake function? maybe this will help! Maybe this will help: I never use the Plex app, so I can't help too much. Thanks for the help! Just installed a Magisk Fire TV stick 4K. There is a Leanback keyboard for everyone. I see it is part of this Roman. Try to turn it off to install and deactivate Magisk and check that the mistakes are not present. 7 This is the only other Magisk module that is installed in addition to XPosed and Selinux Hey. I have just found a 4K (system launcher measure graphics inferior? Permit: Sorry, I noticed that I had already asked I needed. Can I delete it? Only Flash Rom Stocks, XDA you will find a lot. The flashing Roms are always a bit risky. However, Mantis is very cheap equipment. So why are worries? I bought blink Kodi in the new pink but I remembered it was using a FireTV 4K, but I didn't set up the firmware to the latest Version so I was able to root and install TWRP backup. Thank you very much! Works very well! BTW: I also had an error: 255 was mentioned a few pages back. I used another Powered USB Hub (3.0) and everything worked fine. Now my question is: How and where to set up automatic launch of one of the installed applications? I want Kodi to start when fireV starts. Is this possible or do I need to add another application? THANK YOU VERY MUCH!! Good morning. I've been using this for a while and usually works fine. Now I can't open the Plex app. It still plants directly, I tried the google play store and amazon store version. I see the plex app on the screen of the site, it doesn't matter (now I can quit the job) if I'm logged in. I had the same problem with Kodi before. I don't know. Maybe the program is opening again. It was my problem for some programs that were not open. 7 This is the only other Magisk that is installed in addition to XPposed and Selinux Hey. I have just found a 4K (system launcher measure graphics inferior? I had problems with programs that my rooted Roman warehouse did not open when I installed a Magisk Fire stick 4K. There is a Leanback keyboard for the others. I see it is part of this Roman. I try to turn it off to install and disable Magisk and check that the mistakes are not present. The program is opening again. 7 This is the only other Magisk module that is installed in addition to XPfosed and Selinux. And I really don't know? Only Flash Rom Stocks, XDA you will find a lot. The Magisk measure firmware stick 4K. There is a Leanback keyboard for the measurement? Permit: Sorry I noticed that I had already asked what I needed. Can I delete it? Only Flash Rom Stocks, XDA you will find a lot. The flashing Roms are always a bit risky. However, Mantis is very cheap equipment. So why are worried? I bought blink Kodi in the new pink but I remembered it was using a FireTV 4K, but I didn't set up the firmware to the latest version with a FireTV backup. Thank you very much! Works very well! BTW: I also had an error: 255 was mentioned a few pages back. I used another Powered USB Hub (3.0) and everything worked fine. Now my question is: How and where to set up automatic launch of one of the installed applications? I want Kodi to start when FireTV starts. The guides I found and used for this ROM: .... am satisfied with the Leanback launcher. I haven't tried, but it's important. Use TWRP. I create a backup after installation. It was settled in an unused drawer for about a year. I want to know the answer to the factory settings? I hope it is, so I have no other secondary factory settings. I hope this will be clear and help. I know it's difficult, but I'll try to answer if you can. You can customize the launcher according to your needs. However, the most efficient input methods if you don't have a physical keyboard. Important: Installed Netflix and Spotify apps are compatible with Alexa. I couldn't get the DualShock 4 controller to work with Firestick. I don't know anything about this app, sorry. Rooted Posts of this guide: here i

@Synik for creating those life saving Magisk mods that are basically the key to this build. @Pretorian80 for kernel build, SDCARDFS, EXFAT, F2FS, Wireguard, Extended TCP, CIF and NFS options, unprotected ADB. @Bnevets27 for the depressing script. @SKELAO for compiling the bootloader from the PC with LeanBack starter in version 1.48. Remove AFTV CAPS XM from Magisk, Reboot to Twrp, just Open Covenant and Katra Twrp and restart. You will see Google Voice and Google Assistant's magic after restarting! Page 3 anyone have any links to the Fire TV Stick 4K Max (condensed AFTA)? Would it be possible to port it to a Fire TV Stick 4K (condensed as version) allow it to use Android 9...works perfectly but the main video app isVideo playback is the latest Google Play Store download.), 2022, I seem to experience this Roma and Google assistant voice search) if you try to write. I have to let it go, and finally appears. I can view with TWRP. My mouse sometimes takes up to 2 minutes or appear on TWRP. I just let it sit and eventually it pops up and I can view TWRP. Maybe this is a power issue. It takes time for the mouse to be powered with electricity so it can work, so maybe it needs a strong power source from a quick delivery... Does anyone have problems with a wireless mouse on the stick? This is the solution? When I came back to Rome, in the original Prime video program (black screen) and had the same problem. Flashing Old Fixed TZ Software. I removed from here. I only added a tile to Put tz.img to the old version. Thanks man, worked perfectly! (black screen) and the same problem in the application Prime video, and when I came back to Rome, I had a long press on the application The button and begins to press back. Is it possible to update BTW to the latest version and enable menus? None of them are displayed here - even if displayed here - even if selected. Thank you all strange.. zip is only tz.img. Restarts after a few minutes of inactivity. Now problems with the app that I block, restarted and collapse. THANKS! The disadvantage is that the recruitment launcher device does not reboot when I use the kamakiri script again, I'm trying to switch back to TWRP, but the keyboard and mouse don't work anymore. None of them are displayed here - even if selected. Thank you all strange... zip is only tz.img. Restarts after a few minutes of the game. Mainwelmodule >>> com.google.stadia.android... I've read up completely on this thread (because it's already rooted?), can I help please -update-- Regardless, I was able to run the kamakiri script again. I forgot to mention that this stick refuses to receive updates from Amazon, so I can't log into my account to activate eth. Hi, it was a new firmware and see if you can set up a firmware and see if you can set up an APK without performing a firmware update. Sincerely, thanks to start when fireV starts. Is this possible or do I need to add another application? THANK YOU VERY MUCH!! Good morning. I've been using this for a while and it usually works fine. Can I link this with the insurance home I live in? I don't even know how this service works for this settings? I hope it is, but I haven't figured it out. I settled in an unused drawer for about a year. I want to know the answer to the factory settings? I hope it is, so I have no other secondary factory settings. I hope this will be clear and help. I know it's difficult, but I'll try to answer if you can. Gedersll Bluetooth doesn't seem to work, but WiFi doesn't work either. Tips what to do now? Thanks for me, I got it with the keyboard with the addition of FITVV menu. After all, I came back to the original Rome, installing the mouse and the Stereotype and accessed it. Now the main thing I did was to work with the keyboard + the Remote FitvV menu. Finally, I came back to the original Rome, installed the mouse and keyboard via 6.2.7.6, the new remote was immediately loaded. By remote, I mean a mouse with remote control buttons for Fire Menu, Netflix, Disney+, etc. I don't have access to the old remote right away, but I can access it later. This is because after pairing the remote once with a newer ROM and then downgrading to 6.2.7.6, the remote will be automatically detected as it will no longer ask to pair. I wonder if this is a great solution if you lose your firetv menu pairing (I'm not sure this has happened to me a few times with old hentis stick. Edit: I updated the remote control on 6.2.7.6 but factory reset breaks existing pairing. Last edited: May 11, 2022. How did you add the TV settings, can you tell me? I really want/need to add TV settings because there are many options that are not available in the normal menu. Looked at the tvset menu. I looked at the settings. I looked further. Is it like a katana? I can't find it, I already uninstalled the old Leanback and installed version 1.49. I rooted a brand new Fire TV stick 4K but no OTG cable so I unplugged the USB cable. Now I'm using OTG mouse and keyboard, I'm trying to switch back to TWRP, but the keyboard and mouse no longer work. None of them are displayed here - even if selected. Thank you all strange... zip is only tz.img. Restarts after a few minutes of inactivity. Now problems with the app that I block, restarted and collapse. THANKS! All data is backwards compatible. I assume the new remote has a device ID or firmware update that prevents pairing with older ROMs (just those ROMs may still work if paired with a newer version). I wonder if there is a way to resolve this problem preventing the new remote to use it. (Seldon) in order to go as far as possible and will not work with anything. I had the same problem with Kodi before. I don't know. Another alternative is to just use 6.2.8.1+, but then (DTS, etc.) the audio transmission is interrupted again. I tested a 6.2.8.0 and 6.2.8.1 - the first connect to the transmission interrupted, while 6.2.8.1+ problems, but audio transmission works again... Don't you think?). Some time passed and I realized that I was not registered here. I didn't use this ROM specifically, but instead re-imported something similar with similar steps. Basically I wanted something a little more cleaner, but I was still using the 6.2.7.6 ROM. I uploaded some new apk files to make the remote and other applications work. The only installed apps are Google Play Store and Google Play Services. Thanks in advance for your help. This build and the Tynsku Magisk addons are the closest thing to an Android TV ROM. Remote: The thing is, I can't get it to work with the keyboard? FireStick 4K is a pain in the neck. The only pre-installed apps are Google Play Store and Google Play Services. Thanks in advance for your help. This build and the Tynsku Magisk addons are the closest thing to an Android TV ROM. It ties into the kernel and the functions needed to create remotes and stuff. I followed the instructions. Remove the update, delete data and cache, delete and add my Google account. Trying to download something, it says "Download expectation" and does nothing else. My fire was on the black list, so I'm not sure that Amazon App Store does not work. Last modification: October 11, 2021. How did my experience performance in this Rome? I installed, Chemf? I tried the methods to change the initiator over the desertion, and now I thought whether I used ROM even more. While you successfully installed ROM, it seems that everything works except stadiums installed in the Play Store. Updated standard implementation can be found around installed in the google play video too box? Thing is, I can't get it to work with the keyboard? FireStick 4K is a pain in the neck. The only pre-installed apps are Google Play Store and Google Play Services. Thanks in advance for your help. This build and the Tynsku Magisk addons are the closest thing to an Android TV ROM. Don't you think?). Some time passed and I realized that I was not registered here. I didn't use this ROM specifically, but instead re-imported something similar with similar steps. Basically I wanted something a little cleaner, but I was still using the 6.2.7.6 ROM. I uploaded some new APK files to make the remote and other applications work. The only installed apps are Google Play Store and Google Play Services. Updated standard implementation can be found on the blocked CloudFlare on your router to block Amazon OTA updates, there's one around that to get around this restriction. So basically I did: - Remotely I connected the 6.2.8.1 controller, at this point I haven't registered yet, I just rebooted right after remote control configuration / factory backup for the original port in this thread and my old one, so I backed up from my FireStick 4K media as a backup from the original port in this thread and my old one, so I backed up from my FireStick 4K media as a backup from the original port in this thread, restoring the Android TV OS, the only remaining app is the remote control -21 of "Checks gear" /com.com.amazon.tv.deviceControlsettings Jan 18, 2022 "Fire TV Control" / Comazon.tv.Devicontrol tar Infringed on Jan 18, 2022 "Oobe" /com.amazon.tv.oobe mostly belongs to them New more APKs fixed the lag I got after saving data from device 6.2.8.1. Theoretically, at this point, it would be possible to clear the cache and repair the remote, but I did not dare to try it, because this system worked for me. My only issue is that the dream is disturbing but maybe not related to the previous page. If so it could be 6.2.7.6 despite the APK update. I don't know if it's a limitation of the launcher (I'm not using the stock launcher) or something related...6.2.7.6 is very much supported. It's just Netflix etc: the manual installation still works for the stock launcher. If you're using a third-party launcher to get these apps to work, it's necessary to see if that fixes the remote pairing. Last modified: May 27, 2022. Response: Sus i I have not been able to pair this or any ROM 6.2.7.6 new style remote with a brand new flash drive. I wonder if this is a great solution if you lose your firetv remote pairing (I'm pretty sure this has happened to me a few times with my old Mantis stick. but after the last time trying to connect the remote once with a newer ROM and then downgrading to 6.2.7.6, but it may break pairing, but that doesn't happen with every remote. In fact, I wonder if these remote stars are in the same series of the standard series (again). The new remote works changes the same pairing, but when I tried to connect and start to manage the new style remote, it doesn't detect it as a pairing request anymore. I wonder if this is a great solution if you lose your firetv remote pairing (I'm pretty sure this has happened to me a few times with my old Mantis stick, but after the last time trying to connect the remote once with a newer ROM and then downgrade to 6.2.7.6, the remote won't ask for pairing. When trying to install this rom on a new flash drive, there is no way to go to the full install bar, avoiding updates, login to amazon account, etc., at least in my case. I can't go through the whole process. In fact, at no time in my experience have I been able to root or install custom firmware on a new Firestick 4K. My pc shows no devices connected to the device. By the way there is a 6.2.7.6 new style remote working with a brand new flash drive. I wonder if this is a great solution if you lose your Firetv remote pairing, again, this will not work because it is caused issues that I couldn't resolve. I bought an old remote (no service buttons) and immediately paired it after reading 6.2.7.6 where the remote doesn't work. Sorry, the location of the connection information could not be found. It should still work. So in summary, unfortunately the new remotes and home menus are limited (I need Netflix, Disney+, etc.) to use them. Stars lead to all data used is reverse compatible. I suppose the new remote has a device ID or firmware update that prevents it from pairing with older ROMs (just those ROMs may still work if paired with a new one). I wonder if there is a way to solve this problem preventing the new remote to use it. In fact, it would be nice if these remote star devices, from a new ROM with the remote and then downgrades on the ROM ... Does anyone know where I can load on my fire or problem or stick? I bought an old remote control, (no service button) and hurry up right after reading 6.2.7.6 when the remote doesn't work. Sorry, it was not possible to find the location of the connection information. It should still work. So in summary, unfortunately the new remotes and home menus are limited. All stars lead to data used is reverse compatible. I suppose that the new remote has a remote. My pc shows no devices connected to the device. By the way there is a 6.2.7.6 new style remote. 6.2.8.1 is currently using 6.2.8.9 with Leanback Launcher and Play Store, but his setting is a bit faulty if I relax several apps to release storage space and so on. I'm afraid it cannot be secured, but if you are interested, I can give you instructions on how to do it. In 6.2.8.9 the remote control won't work again, so I do believe that 6.2.8.1 is the currently used 6.2.8.9 with Leanback Launcher and Play Store, but its setting is a bit faulty if I relax several apps to release storage space and so on. I'm afraid it cannot be secured, but if you are interested, I can give you instructions on how to do it. In 6.2.8.9 the remote control won't work again, so I don't have the latest version does not crash like DTS (and I don't need DTS transmission from Firetv). I am currently using 6.2.8.9 with Leanback Launcher and Play Store, but his setting is a bit faulty if I relax several apps to release storage space and so on. I'm afraid it cannot be secured, but if you are interested, I can give you instructions on how to do it. In 6.2.8.9 the remote control was renewed again, so I do believe that 6.2.8.1 is the currently used 6.2.8.9 with Leanback Launcher and Play Store, but his setting is a bit faulty if I relax several apps to release storage space and so on. I'm afraid it cannot be secured, but if you are interested, I can give you instructions on how to do it. In 6.2.8.9 the remote control was renewed again, so I do believe that 6.2.8.1 is the last remote that supports remote control via the Fire TV 4K software mix, new 4K models and 4K. latest version does not crash like DTS (and I don't need DTS transmission from Firetv). I am currently using 6.2.8.9 with Leanback Launcher and Play Store, but his setting is a bit faulty if I need to relax several apps to release storage space and so on. Everything that is done with Fire TV magic sticks is chopping, so don't worry about it. Well, you have addressed another thing that I also tried to find out. Which version is the "better" version? If the latest version does not crash like DTS (and I don't need DTS transmission from Firetv). 6.2.8.1 is currently the best generic version for the custom selection. ANDYou will also find options like this for a while and you will find these custom kernels to support NTFS files etc. 6.2.8.9 The offers are more limited. Basically: 6.2.7.6 - Latest full HDMI passthrough version with support for DTS, TrueHD, etc. But this can be problematic with DRM restrictions because they are already so old. Custom cores are available. 6.2.8.1 - Loses relay for all but none Dolby streaming formats (and LPCM still works). 6.2.8.9 - Identical to 6.2.8.1 except it loses some of the HDR features. 6.2.8.9 - Identical to 6.2.8.1, but the custom kernel is not available. more test time for paid streaming. Requires another fix to run custom launcher. Now there is a 6.2.9.0 and 6.2.9.1, but I haven't followed up on what it is and what it takes to make them usable in a custom configuration, so I really can't comment on those. Of course, any solution that requires attention to avoid OTA updates or lose root access, which makes it possible. I uninstalled all OTA related apps and blocked Amazon's update servers for the router for added security. Answer: SUS I Hello everyone! I installed "Firetick 4K Android TWRP Backup.rar" successfully, thanks! My case is blocked by Amazon. I can't burn this device. I have to make a physical registration requirements? If everyone! I installed "Firetick 4K Android TWRP Backup.rar" successfully, thanks! My case is blocked by Amazon. I can't burn this device. I have to make a physical registration requirements? If you are interested in that? Everything works well with root, except installing a "replaced" unit, as Amazon told me. On initial boot, it has to connect to an enable, connect with username and password? - nothing happens. I can't buy Amazon and asked the registration requirements. If you are interested in that? Everything works well with root, except installing a "replaced" unit, as Amazon told me. On initial boot, it has to connect to an enable, connect with username and password? - nothing happens. I can't buy My case is blocked by Amazon. I can't burn this device.Can I bypass the original offer from Amazon? Use the TWRP file manager to delete OBB / Privateeepee. What do you mean with OBB? I don't have found the system/private folder, but it does not contain any folder or no file called OBB ... Page 11 I have the folder "/system/priv-app/com.amazon.ootbe" with overflow twrp and the Firestick 4K file manager deleted. Anyway, I see a screen with Amazon Connect with username and password. I enter the identification information as I called it. I cannot connect to Amazon. I checked this file "/system/priv-app/com.amazon.ootbe" again after this manipulation and still there ... Is there more Fire4tick? I deleted "/System File/Priv-App/com.amazon". TV.Ootbe "Twrp File Manager" and the Firestick 4K overflow. Anyway, I see a screen with Amazon Connect with username and password. I enter the identification information as I called it. I cannot connect to Amazon. I checked this file "/system/priv-app/com.amazon.ootbe" again after this manipulation and still there ... Is there more Firetick 4K in this folder? Your version of Fireos? Try 6.2.7.7. -Access /System /Priv-App/com.amazon.ootbe in this file in this APK file of this folder 0400. (I tried to delete the file because it is recommended, but it does not help and the same happens, I do not know what Happen) I don't know why it happens. Maybe in the future you will also be able to log in to open the system device directly. I deleted the system or APK overflow. There is simply no sole launcher device so it cannot be recommended, but it does not help the same as the same happens, I don't know what Happen) I don't know why it happens. Maybe in the future you will also be able to log in to open the device directly. I deleted the system APK directly. Connect the PS4 controller. Any advice to connect the Amazon remote control? Last edited: 2022. September 7th After a few different attempts I was able to do it. If you find a FITVSTICKK blocked on Amazon, it can be installed TWRP and install the system image. (I tried to delete the file because it is recommended, but it does not help and the same happens, I don't know what Happen) Everything is going well for me On my original Amazon remote control - I cannot be matched. I used the FireTV app on my phone for navigation, and it could also pair for the navigation. I followed too many blacklisted devices and couldn't make my watch Sytn. Other apps don't work on this device, You too won't be able to access apps section from settings Latest Location: 8 Sep 2022 Reaction: Frenzz blacklist even if you skip the option even if it does not allow you to restrict access to the settings and the downloader is useless. Install all OTA related applications and blocked DRM apps because they are already so old. Custom cores are available. 6.2.8.1 - Loses relay for all but none Dolby streaming formats (and LPCM still works). APAIK This version still works with most paid streaming. Custom cores are available. Then you can only track Sytn.Other apps don't work on this device.Also you won't be able to access the apps section from settings. However, you can re-enable OOBE to log in, right? Or will it break something? (Spread someone - Gamazon made this.) Then, one day in the ass)His version? Is it compatible with a bluetooth keyboard? I want to completely block Amazon, but I don't want to block the updates that will block the stick. Are there any other solutions except to leave the stick disconnected from the Internet? Or can I connect my PS4 controller as a replacement? Or can I connect my PS4 controller as a replacement? I can't root my fire (blacklisted) due to overflow and cannot start Adblocker installed on it. However, you can re-enable OOBE to log in, right? Or will it break something? (Spread someone - Gamazon made this.) Then, one day in the ass)His version? Is it compatible with a bluetooth keyboard? I want to completely block Amazon, but I don't want to block the updates that will block the stick. Are there any other solutions except to leave the stick disconnected from the Internet? Or can I connect my PS4 controller as a replacement? I can't root my fire (blacklisted) due to overflow and cannot start Adblocker installed on it. However, Amazon connected and blocked the DNS directly on the router. Also, you won't be able to access the apps section from settings. However, you can re-enable OOBE to log in, right? Install all OTA related applications and the blocked DRM apps because they are already so old. distant controller works in this Rome that you have already controlled here. There is a chance to turn off if this mod is connected to the connected here. There is probably something that is not compatible with the essence of the system. The new launcher Rome is probably the best solution. Last edited: September 12, 2022 This Rome firmware and Magisk addons are the closest thing to an Android TV ROM. It ties to the kernel and can turn it off without installing anything. ensure that a remote contract is carried out? I have the same problem with a distant control, I can't use it as described here. Is there a way to disable it if this mod is connected to the connected here? There is probably something that is not compatible with the essence of the system. The newyounger Rome is probably the best solution. Last edited: September 12, 2022 This Rome firmware and Magisk addons are the closest thing to an Android TV ROM.
