

Continue

I'll admit it. I'm forgetful, and it get worse every year. Smart phones are a life saver here, without them I'd never get anything done because I'd spend my life trying to remember the things I need to remember. I need a calendar that synchronizes. I need a to-do list manager. But what I need most of all is something that let's me jot down bits of information on the go so I can sit later with a cigar and a nice espresso and fill out the calendar and to-do lists. That's where 3banana Notes comes in. Follow along after the break to learn some more about the notepad with the silly name. There's lots of notepads on the market, and I think I've tried them all. I even tried voice memo's for a while...which was a disaster of epic proportions and another story altogether :) When I came across 3 Banana notes I stopped looking. Whoever dreamed up the idea of a notepad that embeds images and text, sync's OTA and can grab text from barcodes needs a medal.Enough of my gushing, let's have a look at the app.The interface is simple. Pleasantly simple. Click a button, enter some text or scan a barcode, attach a picture or take one. Take a memo!The setup is easy enough, you can use your Google credentials or set up an account at snaptic.com to sign into snaptic's secure servers for syncing, decide if you want or need to geotag your photos and set your font size. Nothing complicated, and it shouldn't be. It's a notepad not a scientific calculator. Don't know about you guys, but I like simple.nice and simpleOnce it's set up, you just jot down your note on the fly, save it when done, and there you have it. 3 Banana supports labels and hashtags, and all text is searchable so you can find what you need to remember. A big plus is the syncing feature. If you use a Snaptic account, you can sync between 2 (or more) devices. When I discover that I'm about out of my Roasted Chicken Ramen, I can make a quick note, sync it, and my wife knows I need more fuel, all without ever leaving my mancave out in the garage!Houston, we have a problem!You can also share your notes via Email, Facebook, or Twitter if you would like. The obligatory "Pin to homescreen" function is there, as is a pretty decent widget.Homescreen widget and a pinned notef if you need a little organization in your life, have a look at 3 Banana notes and I think you'll be glad you did. A mobile software application developed for use on devices powered by Google's Android platform. Android apps are available in the Google Play Store (formerly known as the Android Market), in the Amazon Appstore and on various Android App-focused sites, and the apps can run on Android smartphones, tablets, Google TV and other devices. As with Apple and its Apple App Store apps, Google encourages developers to program their own Android apps. While many Android apps can be freely downloaded, premium apps are also available for purchase by users, with revenues for the latter shared between Google (30%) and the software developer (70%). Additionally, some Android Apps follow the freemium business model, wherein the app developer can derive revenue on free apps via Google's in-app billing capabilities. Whether you're a student who's got the 2019 budget iPad Pad 7 with an Apple Pencil for taking notes in class, or a business owner who can afford the newest iPad Pro, interested in jotting down work-related or personal notes, you may find yourself torn between all the good options for notes apps available. We'll take a look at some of the most fully-featured notes apps for iPad, and see which is the one to best fit your needs. The apps on this list work great on all iPads with Apple Pencil support.Microsoft OneNoteNotabilityGoodNotes 5 Price: Free | DownloadNot only is Microsoft's OneNote completely free, but it covers all the basics most people need from a notes app, with the added bonus of cloud syncing between your devices through OneDrive.OneNote also supports collaborative work, by allowing for shared notepads. To-do lists such as daily errands, memos and anything else you may need to write can be well organized in pages, sections and notebooks.The available pen colors and pen settings can help add variety to your notes, while a "Convert to Shapes" mode automatically converts hand drawn shapes such as circles into perfectly regular ones. Support for images and image manipulation, an important feature to many, is also here, and works great. Price: \$8.99) DownloadNotability enjoys great popularity and for good reason, as it's arguably the most feature-packed notes app for iPad.It supports a large variety of multimedia, not just static images, but GIFs, web pages, scanned textbooks and even audio, and allows for looking up handwritten text, written with precision thanks to the app's fine-tuned digital ink. It's also cloud-syncing your notes via iCloud, all that easily making it the best iPad app for students.Conveniently, Notability was also made with multi-tasking in mind, allowing for working with two notes side-by-side, in addition to it having a dedicated Note Switcher for quickly moving between notes, on top of supporting Drag & Drop. Price: \$7.99) DownloadGoodNotes 5 is a combination of digital notepad and PDF markup tool, as noted by the App Store editors. It delivers a precise and natural writing experience thanks to its signature vector ink engine.As the previous apps on this list, it too supports pen colors, thickness and style, as well as easily switching to a highlighter or eraser. Like Notability, GoodNotes 5 too can read your handwriting and allow for searching through it when needed, as well as converting it to text for easy sharing into other apps or even web pages.This app also supports for two pages to be open side-by-side, and for quick switching between documents using tabs. A tool for easily drawing perfect shapes such as circles and lines is available. As mentioned earlier, GoodNotes supports importing, searching and navigation through PDF files, but it also works with PowerPoint, Word, image files and more.Honorable mentions go to the popular and free Evernote app, which is better suited for iPad keyboard users, and the free Notes app that comes with iPad and iPhone. The latter is vastly less advanced than previously mentioned apps, but could easily be good enough for many.For those looking into more complex apps, I would recommend first trying the free OneNote before buying anything else. Taking notes with your phone or tablet is a convenient way of staying organized. You can use your device to create to-do lists, keep track of important appointments, or even take notes during classes and meetings. Apps like Bear, SimpleNote, Quip, and others allow you to write, draw, share your notes, and add files to your notes. Choosing the right app to take notes on the go will ensure you never fail to record anything important. We've picked some of the best note-taking apps available. Evernote Evernote is a popular note-taking app that supports multiple ways of taking notes, such as lists, voice memos, photos, and video — and it supports Word and PDF documents. One of Evernote's best features is that it syncs across all your devices, so you'll always have the most recent version of your notes. In recent updates, the app will now start your search in the notebook or space you're in by default. When you filter your tags, you can now choose whether or not to include child tags. You can now reveal and edit an encrypted block of text without permanently decrypting it first. Evernote is free to use, but you can upgrade to the premium version for \$8 per month or \$70 per year if you want to add extra storage, password protection, or access files offline. iOS Android Notability (\$9) This iOS-only app is the paper-free way to take notes and stay organized, supporting a variety of note-taking methods including text and audio. You can mark up imported documents, slides, or textbooks, add photos or GIFs, and even import and mark up web pages. It's easy to organize and search for your notes thanks to customizable dividers and subjects. Notability lets you scribble sketches or add handwriting to your notes, record and play back audio, and open multiple notes at once in new windows, and it's easy to share your notes via email, Dropbox, Google Drive, OneDrive, and other cloud services. You can even use iCloud to auto-sync your notes across your iPhone, iPad, and Mac or use the auto-backup feature to save notes to the cloud. The newest version adds support for multiple windows and maintains color when converting handwriting to text. The spoken word is now highlighted when speaking text. iOS Bear Bear is an easy-to-use, powerful app that lets you combine text, photos, to-do lists, and code snippets. Bear's markup editor supports more than 20 programming languages. The app also makes it easy for you to search through all your notes and focus on specific items with triggers such as @task, @tagged, and @files. The app is compatible with iMessage and the Apple Watch. You can expand Bear's capabilities by subscribing to Bear Pro for \$2 per month or \$15 per year. The Pro version lets you convert your text into PDF, Word documents, HTML, or you can sync your notes across devices. For the iPad, Bear supports the Apple Pencil and hand sketching. Recent versions feature autocomplete for tags, notes, and code, a revamped mechanism for collecting webpages, Siri shortcuts and search, and the ability to use Siri to create new notes. iOS Simplenote Simplenote aims to be simplicity itself and largely succeeds. If you need to back up and sync your notes across all of your devices without the hassle of a subscription, then this app has you covered. You can also share notes and collaborate with other users. Once you set up a free account, you can start creating, tagging, pinning, and sharing notes. The interface is straightforward and easy to use. Don't worry about having too many notes — Simplenote lets you tag, pin, and organize your notes, and it also packs a good search feature. Extensive updates for iOS include integration with Siri shortcuts and the ability to launch the app, open notes, and create new notes directly from Siri. New actions, pin, and share are available in the Notes List, which now displays an icon showing published notes. A new widget to view notes lets you open them in the app from the home screen. iOS Android Quip If you're looking for a serious note-taking and collaboration app that works well with larger teams, check out Quip. The app provides a place for teams to create live documents accessible for edits by all participants. As a combo chat, documents, task list, and spreadsheets all rolled into one, Quip lets you create, share, and collaborate on notes, task lists, or documents with any group. You can also chat in real-time with team members, eliminating the need to exchange multiple emails. From whatever device you're on, you can access and edit spreadsheets. Your work syncs across all devices, so you can pick up where you left off. The app lets you import documents from Dropbox, Google Drive, Box, and Google Docs and export documents as PDFs or Microsoft Office files. Quip also lets you import your address book from Yahoo, Hotmail, Microsoft Outlook, Google, or iCloud. Later versions let you attach videos to messages and comments. iOS Android Notebook Notebook is a free, consumer-oriented, cross-platform note-taking app that organizes your to-do lists and tasks visually in an attractive card interface, with notes appearing as stacked colored stickies. Notes are customizable, so you can group them by pinch gestures into a stack or swipe across them to view additional information. You can attach files to notes — audio, images, and web clippings — plus reminders and due dates. Content syncs across all of your devices, and notes are searchable. On iOS, you can create and view recent notes from the notification panel and record voice memos with an Apple Watch. On Android, you can create shortcuts to notes on your home screen. Recent Android versions let you view 20 previously modified notes across notebooks and quickly create notes from the widget. On iOS, Notebook is optimized for iPad Pros, complete with support for Apple Pencil. You can now easily add tags, add a title, organize your bookmarks, and delete completed items. You can now also set recurring reminders to your note cards. iOS Android Any.do Any.do is a to-do manager and productivity app wrapped in one. Its Moments daily planner helps prioritize your tasks. A unified timeline shows scheduled notes, reminders, and appointments. The app features pop-up shortcuts for missed calls and canned responses while you're speaking. A zooming feature lets you zero in on tasks and subtask details. For a premium of \$3 a month, you can share an unlimited number of tasks with collaborators and upload files to a digital locker. Any.do Premium for Premium and Pro accounts — for \$18 and \$27 per year, respectively, let you customize Any.do's theme, set recurring tasks, and establish location-based reminders. Recent iOS versions support Siri and have a new calendar with three views for managing tasks and events, a focus mode (premium version) that helps you concentrate and avoid distractions, and the ability to share an article you liked on the web with the Any.do app. You can now filter lists by tag to create and manage lists and projects. iOS Android Todoist Todoist encourages you to organize your tasks around projects rather than lists. Individual to-dos live within projects and can be customized with due dates, reminders, flags, and subtasks. Todoist interprets your notes using natural language and features organizational filters by priority and due date, alongside offline support and automatic cloud backups. A Pro subscription costs \$4 a month or \$36 a year and gets you auto-reminders by phone or email, template creation capabilities, automatic task backup, projects, comments, or files, and your own labels, themes, and task views. Premium allows up to 300 projects. Newer versions customize your watch face with the number of tasks you have left and lets you pick from over 20 color schemes. Todoist now also integrates with your favorite apps so you can track your time, share files, and block time off your calendar right from Todoist. Recent updates let you scan text to turn handwritten notes into tasks, link back to any task from Quick Note, find out who's assigned to what from your widget, and get an overview of your day with an extra-large widget on your iPad home screen. iOS Android Remember the Milk If minimalist task management is your thing, Remember the Milk may be the app for you. You can create to-dos and attach due dates, tags, notes, and estimated time of completion, and organize tasks by categories. Remember the Milk features natural language recognition for words like "tomorrow" to prompt reminders. It supports location-based reminders, lets you share tasks or entire categories, and restrictions on task editing. The App supports Siri Shortcuts and Apple Watch. A premium tier adds a few features. In addition to unlimited task storage, the \$40 per year Pro subscription lets you see devices associated with your account, back up tasks automatically, get subtasks and advanced sorting, and share and assign tasks, receive push notifications, sync offline, and integrate with Microsoft's Outlook Tasks software. iOS Android Google Keep Google Keep, a free task manager, plays nicely with Google's other services, so every note you add to Keep is searchable and accessible from within Google Drive. It even integrates with Google Assistant — but you'll need to set up Google Keep as your default app. Keep inherits a few of Google's machine learning smarts. It can transcribe text from images using optical character recognition, and by parsing the content of your notes for keywords, it automatically filters your notes by topic, location, and activity. You can color and add labels to code notes for quick organization or record a voice memo, which Keep will transcribe. You can perform elaborate multi-word queries and save items on your phone, tablet, computer, and watch, with everything syncing across all your devices. Although you can't delegate tasks to other people, fine-tune permissions, or add comments, you can collaborate with others and see their real-time edits. Recent updates include a new dynamic canvas that lets you create drawings and handwritten notes. iOS Android OneNote Microsoft's OneNote supports to-do lists with subtasks, starred tasks, highlights, labels, tags, and — on the desktop and the web — an array of formatting options. You can attach images, videos, links, screenshots, files, spreadsheets, and most file types. OneNote has a file revision history browser that lets you see what changes authors have made to a document over time. With its optical character recognition, it can automatically transcribe text or PDF documents with notes stored in the cloud. OneDrive is accessible from any internet-connected device. You get 15GB for free, shared among other Microsoft Office apps. On iOS, it supports document search through Spotlight and multitasking via Split View, as well as Apple's Pencil. Android users get the OneNote badge: A floating widget that lets you create a note in any app. Recently added features let you quickly import details from any scheduled Outlook meeting into your notes. You can now lock pictures to the page background for easier drawing and annotating. The page sync status button lets you see when the current page was last synced. The iOS versions let you drag and drop content into and out of OneNote between other apps. Recent updates let you sort your notes alphabetically, by edit date, or by creation date. iOS Android Microsoft To Do Microsoft To Do helps cut down on daily chaos by tracking your events, reminders, and to-do suggestions in a free, minimalist application. The productivity app features My Day, a daily planner tailored to you and your alerts that labels events in color-coded groups. It's also collaborative to enable people to work on the calendar simultaneously. You can set one-time appointments or recurring due dates. Each alert features a nudge to alert you of your next appointment. You can also attach notes or files up to 25MB directly to any task. The app is compatible with Outlook and lets you sync tasks across devices and compile tasks from your Microsoft 365 apps and services. The Assignments feature helps you delegate tasks to share with your family, team, or organization. You can also enable a setting for flagged emails iOS Android Editors' Recommendations
